

"CS_Gen" Contact Sheet Generator

This tool is meant to help streamline the creation of contact sheets for a specified spot or show. It will look through a specified show directory, look through all the shots and find the latest rendered versions, then create a nuke script and render out a jpg (or any image type) of the contact sheet to the same root show directory.

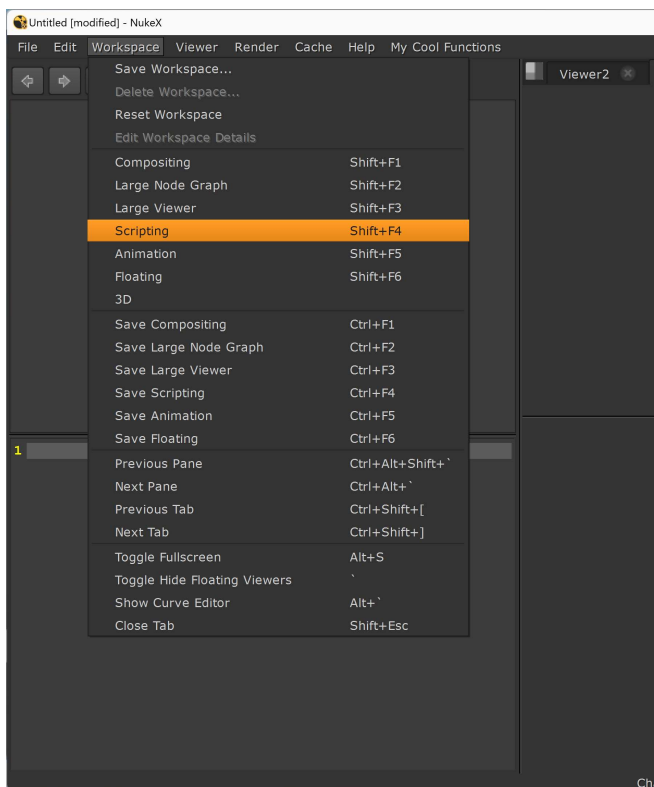

Here's how it works:

Step 1.

Open an empty Nuke scene.

Step 2.

Set the workspace to "Script Editor" or otherwise navigate to the Script Editor in Nuke.

Step 3.

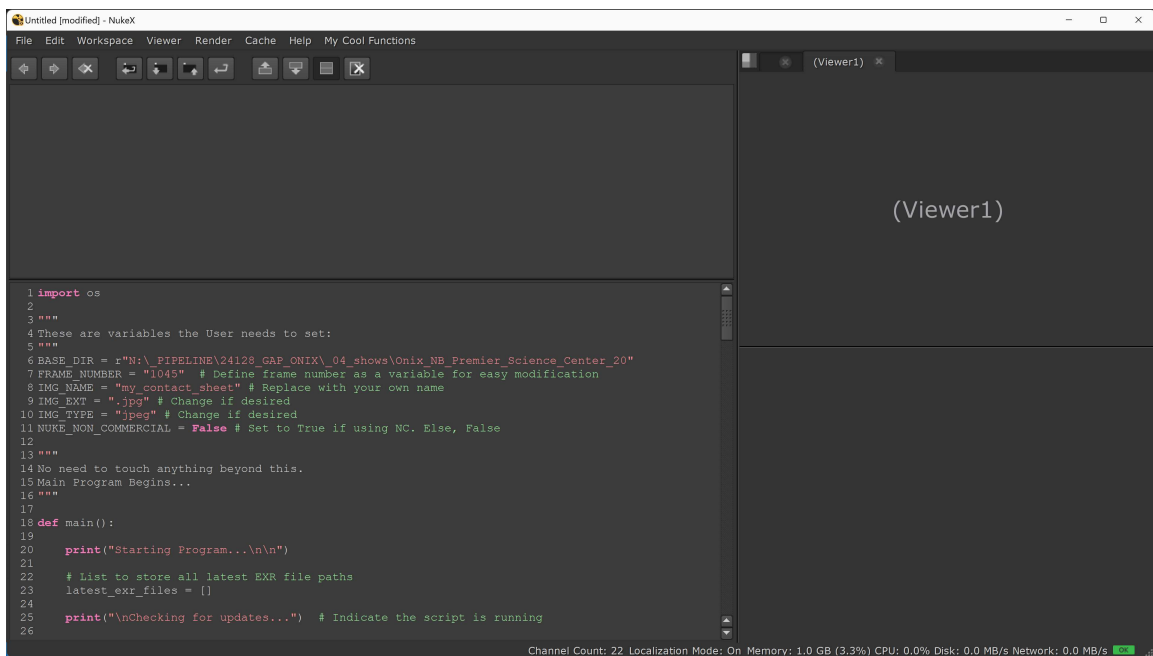

In a separate text editor, like Notepad, open CS_Gen_4AFX.py

Step 4.

Select All, and Copy the contents of CS_Gen_4AFX.py

Step 5.

Paste the contents into the Script Editor in Nuke.

Step 6.

Scroll to the top and find the user variables, in all caps at the top of the script.

These variable can be changed, such as IMG_NAME, which is going to be the name of the jpg that is output. Ex: My_Contact_Sheet, or Music_Store_CS.

```

"""
These are variables the User needs to set:
"""
BASE_DIR = r"N:\_PIPELINE\24128_GAP_ONIX\_04_shows\Onix_NB_Premier_Science_Center_20"
FRAME_NUMBER = "1045" # Define frame number as a variable for easy modification
IMG_NAME = "my_contact_sheet" # Replace with your own name
IMG_EXT = ".jpg" # Change if desired
IMG_TYPE = "jpeg" # Change if desired
NUKE_NON_COMMERCIAL = False # Set to True if using NC. Else, False

"""
No need to touch anything beyond this.

```

The most important variable, however, is the BASE_DIR, which is the base directory

for the desired spot or show. Copy and paste the desired path.

```

BASE_DIR = r"N:\_PIPELINE\24128_GAP_ONIX\_04_shows\Onix_NB_Premier_Science_Center_20"
FRAME_NUMBER = "1045" # Define frame number as a variable for easy modification

```

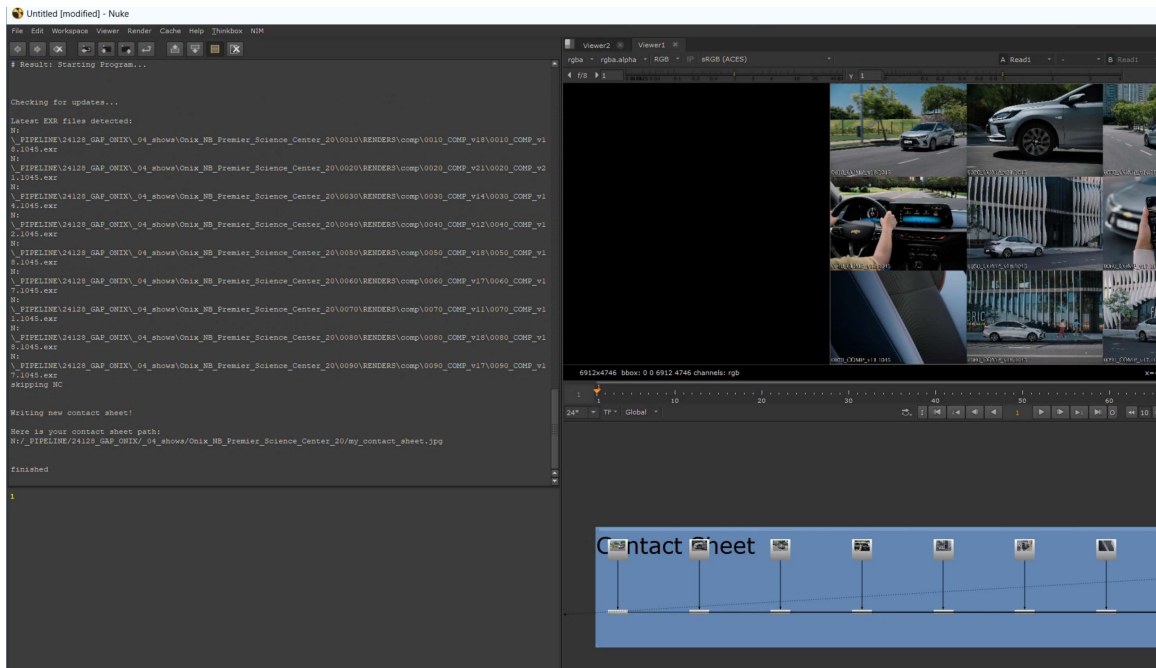

Step 7.

Simply hit the "Run the current script" button, or Ctrl+Return as a hotkey to run the program.

Step 8.

You're done! You should see a node tree in your node graph neat and tidy, and there should be a jpg file in the same place as your BASE_DIR.
